ix Twido® Benchmark for success in security technology

Advantages

- Very high key copy protection
- Very high manipulation protection
- Long-term patent protection

ix Twido®

Benchmark for success in security technology

The new reversible key system, DOM ix Twido® is particularly well protected against unauthorised copying thanks to the float-mounted double roller in the key. A special high-deep milling (HT) technique used in the horizontal basic profile enhances security during profile checks and is difficult to copy. The new DOM ix Twido® does justice to almost every security requirement. With its new roller technology and the sophisticated design, you are holding a locking system in your hands that truly has more to it than meets the eye.

The key with the “special extra”

■ A SPECIAL DEGREE OF SECURITY

The DOM ix Twido® system uses a patented high-deep milling technique and an innovative, patented, float-mounted double roller in the key. The system thus offers high technical key copy protection and very high manipulation protection against-opening techniques.

■ HIGH CONVENIENCE

The reversible key made of high-grade nickel silver offers a high degree of operating convenience and its key blade length is matched to the most common security fittings.

■ EXTREMELY LARGE NUMBER OF POSSIBLE USES

The DOM ix Twido® system was developed for use in larger, hierarchically organised buildings in medium-sized or large industry with high security requirements. We offer numerous different locking cylinder variants for almost every door situation. In addition, the DOM ix Twido® system can also be used as part of a master key system. You can open all doors with just one key. Such as e.g. your front door, cellar door, letter box, garden gate or garage door.

■ SECURE INVESTMENT

The optional modular technology offers flexible adaptation of the locking cylinder length at any time on site (e.g. due to moving or the use of new doors). In addition, the hardened steel web provides enhanced protection from violent “breaking off” and “pulling” of the cylinder.

In detail

- 1 NEW KEY HEAD DESIGN
- 2 LENGTH OF KEY BLADE MATCHED TO ALL STANDARD SECURITY FITTINGS
- 3 COMPLEX CODING IN THE KEY
- 4 REVERSIBLE KEY WITH TWO INDEPENDENTLY MOVING ROLLERS
- 6 ANTI BUMPING & ANTI PICKING PINS
- 7 DRILL-OPEN PROTECTION VARIANT
- 8 UP TO 12 REVISION PINS
- 5,9 7 SPRUNG TUMBLERS MADE OF SPECIAL BRASS OR HARDENED STEEL INCLUDING ROLLER FUNCTION PINS

- 9 ROLLER FUNCTION PINS
